Try this proven product to minimize the moisture that condenses within pedestals. Moist air inside pedestal closure bases condenses on the cooler gravel, reducing the amount of moisture on internal components. The result is long-term savings because of less corrosion and longer equipment life.

Besides reducing the potential for corrosion, PREPARED GRAVEL discourages nesting by rodents, reptiles and other animals.

PREPARED GRAVEL is screened to the proper size providing faster run-off to ensure moisture drains quickly. The gravel is triple washed so that no dirt, mud, etc. is left to absorb and hold water. It is then packaged in UV-stabilized, burst-proof bags.

PREPARED GRAVEL also adds stability to the installed pedestal base. Firm installation prevents movement caused by maintenance personnel and mowing equipment.

Easy-to-carry and pour bags reduce the cost of installation and pedestal maintenance.

Use PREPARED GRAVEL to add stability to pedestals during installation or to “Rehab” existing pedestals.
