

AcidSafe+Plus

Instructions for Use

CAUTION

Do NOT use on hydrofluoric acid or HF compounds. Only qualified, trained personnel should attempt the cleanup of a hazardous materials spill. Wear protective clothing and equipment. Product may cause irritation to the eyes and skin. Avoid breathing any gaseous vapors that might be given off during neutralization. Large amounts of heat can be generated when using on strong mineral acids. For eye contact, flush eyes with water. Seek medical attention if necessary. For skin contact, wash with soap and water. For inhalation of vapor, move to fresh air. Seek medical attention if necessary. Please note that **AcidSafe+Plus** will become slippery during use.

1. Put on appropriate Personal Protective Equipment (PPE) before attempting spill cleanup.
2. Apply **AcidSafe+Plus** to spill from perimeter inward. The neutralization process may produce heat and foaming gasses. Color indication identifies strength (pH) of acid:

GOLD color indicates **STRONG** acid

YELLOW color indicates **MILD** acid

PURPLE color indicates acid is **NEUTRALIZED**

3. Use sufficient Neutralizer to eliminate presence of any free liquids and turn mixture to a uniform purple color.

*NOTE: When yellow or gold colors are visible in the absorbed mixture, add water to ensure full neutralization will occur. Mix water into residue until a uniform PURPLE color is present. Then add additional **AcidSafe+Plus** to absorb any free liquid.*

4. Allow mixture to cool before cleaning up.
5. Clean up neutralized mixture and place in leak-proof container.
6. Label and dispose in accordance with local, state and federal regulations.
