REPORT

Lab Sample No.: 42253

Rainbow Instant Hand Sanitizer (#7152), lot #599207, Exp. 06/12 was contacted with rubber linemans gloves (Type 1, Class 2, ANSI/ASTM D120) to determine if any significant changes occur in the tested properties of the gloves.

PROCEDURE

Tensile Properties

The outer-surface of the glove was rubbed with a liberal amount of Rainbow Instant Hand Sanitizer, wiped off, allowed to stand thusly for 4 hours and then washed with mild soap and warm water. The above procedure was repeated once a day for 3 days. On the fourth day, samples were cut from the cuff areas of the gloves and tested as reported.

Area Swell

Test samples were measured after 24 hour soaks at 75°F in the Rainbow Instant Hand Sanitizer.

AC Electrical Proof Tests

Glove samples exposed to the Rainbow Instant Hand Sanitizer as per tensile property samples but were not cut up. Test was performed at 20 KV @ 3 minutes; maximum proof test current was recorded during last 20 seconds of the test. Pass/Fail criteria is based on a maximum proof test current of 18 mA as dictated by Class 2 and 16" glove length. Clearance from cuff to water line was set at 3 inches. Test was repeated after 16 hour soak in distilled water.

Note: (FO) Flashover indicates that the arc occurred over, but not through the glove.

**DISCUSSION**

The samples are slightly affected as to the physical properties, but show no affect as to the AC electrical proof tests. The 0.5% swell indicates that the rubber does “soak up” the Rainbow Instant Hand Sanitizer, but not substantially.
