· Additional information:

MDI products have poor warning properties, since recognition of an odor is far above the TLV. Observe OSHA regulations for respirator use (29 CFR 1910.134).

The lists that were valid during the creation were used as basis.

· Exposure controls

· Personal protective equipment (see listings below)

· General protective and hygienic measures:

Keep away from foodstuffs, beverages and feed.

Immediately remove all soiled and contaminated clothing.

Wash hands before breaks and at the end of work.

Avoid contact with the eyes and skin.

· Breathing equipment:

Airborne MDI concentrations greater than the ACGIH TLV-TWA or OSHA PEL can occur in inadequately ventilated environments when MDI is sprayed or heated. In such cases respiratory protection is required. Use approved respiratory protection equipment when airborne exposure is excessive. Consult the respirator manufacturer to determine the appropriate type of equipment for a given application. Observe respirator use limitations specified by the manufacturer.

· Protection of hands:

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

· Material of gloves

Butyl rubber, BR

Chloroprene rubber, CR

Nitrile rubber, NBR

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer.

· Reactivity
  · Chemical stability
  · Thermal decomposition / conditions to be avoided:
    Contact with moisture, other materials that react with isocyanates, or temperatures above 350°F (177°C), may cause polymerization.
  · Possibility of hazardous reactions
    Violent reaction with water at high temperatures.
    May produce violent reactions with bases and numerous organic substances including alcohols and amines. MDI reacts slowly with water to form Carbon Dioxide gas. This gas can cause sealed containers to expand and possibly rupture. Contact with moisture, other materials that react with isocyanates, or temperatures above 350°F, may cause polymerization.
  · Conditions to avoid
    Moisture
    Avoid high temperatures. Avoid freezing.
  · Incompatible materials:
    Reacts with amines, caustic alkali solutions, alcohols, ammonia, oxidizers, acids, polyols.
    Reacts with water forming carbon dioxide-may rupture sealed containers if contaminated with water.
    May produce violent reactions with bases and numerous organic substances including alcohols and amines.
